RAVI ISSAK RAJ

AI Engineering Intern Candidate

Kakinada, Andhra Pradesh, India | +91 7013017818 | issakrajraj@gmail.com
glitchgo.tech | GitHub | LinkedIn | YouTube: Tech x Tech | LeetCode | HackerRank

PROFESSIONAL SUMMARY

Computer Science undergraduate who builds and ships AI systems end to end: fine-tuning LLMs, training and serving computer-vision models, and securing AI agents in production. Hands-on with PyTorch, QLoRA fine-tuning, FastAPI model serving, Docker deployment, and MCP tool integration, backed by a systems background in low-latency backends. Founder of GlitchGo, architect of AdminZero (security gateway for AI agents, 2.8ms average latency), and author of two books on shipping software and AI products.

EDUCATION

B.Tech, Computer Science & Engineering | Pragati Engineering College | CGPA 8.95/10 — Expected June 2028

TECHNICAL SKILLS

- **AI Engineering:** LLM fine-tuning (QLoRA, Unsloth, LoRA adapters), PyTorch, Hugging Face, computer-vision classification (ResNet), LLM integration (OpenAI, Anthropic, Gemini, open-source), prompt architecture and context management, tool use / MCP, Ollama, RAG fundamentals (embeddings, vector search, retrieval), LLM guardrails and prompt-injection defense
- **Languages:** Python, TypeScript, JavaScript, C++, C | **Backend & Infra:** FastAPI, Node.js, Flask, REST APIs, WebRTC, Docker, SQLite, LRU Caching, Vercel
- **Core CS & Security:** DSA, OOP, System Architecture, Cryptography (AES-256-GCM), Compiler ASTs | **Frontend & Tools:** React, Vite, Next.js, Git, Linux

AI PROJECTS

ZAC (Zenith Artificial Cognizant) | Qwen3-VL, QLoRA, Unsloth, Ollama, Docker — github.com/ISSAKRAJ/zac-agent

- Designed an end-to-end fine-tuning pipeline for a custom AI agent: QLoRA training of Qwen3-VL-8B-Instruct with Unsloth on a custom ShareGPT-format conversation dataset, producing LoRA adapters and a local inference CLI
- Engineered a persona-driven system prompt (probes intent first, challenges assumptions, no sycophancy) and shipped multiple Ollama Modelfile variants (fast, reasoning, 7B) for local serving at different latency/quality tradeoffs
- Prepared deployment with Docker, a Hugging Face Spaces and GCP deploy script, and MCP server configuration for tool-augmented use; added a test suite

AI Image Detector | PyTorch, ResNet18, FastAPI, React — github.com/ISSAKRAJ/ai-image-detector

- Built a full-stack classifier that detects AI-generated vs real photographs: fine-tuned ResNet18 in PyTorch, served through a FastAPI inference API (`/predict`) returning per-class probabilities to a drag-and-drop React UI
- Built the full ML workflow: dataset import and train/val splitting, training and fine-tuning scripts, env-var-driven hyperparameters, and CLI tools for bulk image download and single-image testing

SYSTEMS & SECURITY PROJECTS

AdminZero | AI-Agent Security Gateway | Node.js, AES-256-GCM, SQL AST — glitchgo.tech/adminzero

- Engineered a fail-closed gateway between AI agents and databases that isolates credentials and deterministically blocks Prompt-to-SQL (P2SQL) injection in LLM-generated queries
- Built an AST-based SQL firewall (compiler-level parsing) blocking 11/11 critical mutation patterns; optimized to 2.8ms average (3.9ms p95) latency with a custom LRU cache; added an AES-256-GCM Zero-Trust Tokenization Vault

Connect X | TypeScript, WebRTC, Node.js — connect-x-eta.vercel.app

- Architected a zero-knowledge peer-to-peer encrypted voice and text platform with no persistent backend database and a custom signaling layer that routes through symmetric NATs and firewalls

One For All Generator | React, Docker, Node.js, FFmpeg — one-for-all-generator.vercel.app

- Built a multi-utility web app for file operations, PDF manipulation, and document conversion in Docker-isolated sandboxes, with optimized streaming pipelines that cut memory use on large transcodes

PROFESSIONAL EXPERIENCE

Founder & Systems Architect | GlitchGo — Jan 2026 - Present

- Launched and run a B2B technical support and deployment platform for startups; own system design, deployment pipelines, automated monitoring, and real-time client traffic management

Technical Content Creator | Tech x Tech (YouTube) — 2024 - Present

- Run the full production pipeline publishing Telugu-language technical content on programming, developer tools, and AI

PUBLICATIONS & HACKATHONS

- **Ship It With AI** - self-published book on building and shipping AI-powered products, Amazon KDP (amzn.in/d/0eeXeXV1)
- **SQLite + Next.js Production Blueprint** - self-published book on production-grade database integration, Amazon KDP (amzn.in/d/02JDraQ4)
- **Hackathons:** OpenAI x NxtWave Buildathon 2025 and Bajaj HackRx 6.0 - built scalable backend systems and APIs in time-constrained national events
